

MARIA CARVALHO

FULL-STACK WEB-DEVELOPER

PROFILE

Currently based in Braga Portugal. I'm passionate about developing efficient and creative web-applications. I love to learn new things and new dynamic ways to solve problems. I'm a very practical person but I enjoy the beauty in life that's why I deposit value on the aesthetic side of things too. Also a music-geek.

FULL-STACK WEB-DEVELOPER

PROJECTS DETAILED

U. T. Químicos, Lda Official Website

June 2023 - July 2023

This was my first freelance job where I had to design and develop the company's website from scratch. This is a front-end project using the ReactJS Framework. Here I tried to make a visually pleasant yet straightforward WebApp so the user would have a positive and functional experience surfing the site. I also created the logo of the company using adobe illustrator. This WebApp is responsive.

Psychologist Official Website (Full-Stack)

March 2023

My final project at Ironhack. This website is both a on the surface only informative, but there is a "hidden layer" where the admin can do Log In and enter the platform being able to do CRUD operation pretty much on every component of the Website. The Admin is also able to manage the collaborators. The only thing the collaborators can't do that Admin can is add new or delete collaborators. Both Login in the same Login landing page (<https://marialuisasilvapsicologia.com/login>). Me and my project partner were requested to do this project by a psychologist from Braga, Portugal, as a matter of fact, it is on use ever since the deployment. It's responsive!

CryptoCurrency Platform (Full-Stack)

February 2023

My second project at Ironhack. With this Full-Stack website, done by me and my project partner André Lisboa, we create a webpage listing the most valuable cryptocurrencies in the market, while also allowing users to track prices by adding coins to their portfolio or watch-list. To accomplish this, we utilized CoinGecko API.

MetroMania - Game

January 2023

My first project at Ironhack, it was done by me and my project partner. This is a JavaScript based game where our player has to dodge incoming passengers in order to catch the metro on time! Controllers: Arrow Up and Arrow Down.
